the ways towards the fabrication of new functional materials**

# Going to functional supramolecular devices....by self-assembly

Despite the thermodynamic stability of the assemblies resulted from simple molecular components they are in dynamic equilibrium between monomer and supramolecular oligomers and only few examples clearly showed single-channel activity in lipid bilayers (40 Å)

# Nucleobases as supramolecular synthons

- High ability to form directionally controlled multiple intermolecular H-bonds of complementary nature - **Thermodynamic control**
- They form a very diverse set of interconverting supramolecular entities *via* the combination of H-bond pairings- **Diversity**
- **High functionality**

Amplification and Transcription of the Dynamic Supramolecular Chirality of the Guanine Quadruplex<sup>\*\*\*</sup>

Carole Amal-Hérault, Andreea Banu, Mihail Barboiu,\* Mathieu Michau, and Arie van der Lee

Complex dynamic feedback between *achiral* molecular partners gives rise to the *chiral* supramolecular architecture which can be amplified with a collective behaviour by using the a well adapted transcription strategy.
